

## Let's Save Electricity

**Never touch any Electrical or Electronic Appliances without parental guidance.**

**Do not touch the switches or plug points with wet hands.**

### “ELECTRICITY-SMART” TIPS:

- 1) **Switch off** the lights, TV and fans when you are leaving the room, even if you will be back in a few minutes.
- 2) Avoid switching on lights during the day time
- 3) Keep the windows open in the day for a brighter home
- 4) Keep your study area beside the window
- 5) Keeping the fridge door open is a big waste of energy.
- 6) During evenings, try and share a lit room instead of each family member using a different room
- 7) Use elevator only if you are carrying something and going up. Try if possible to walk down the stair case. **Make a poster about this point and put it up in your apartment lift.**
- 8) **Make small “Save Electricity” posters and ask your parents to stick them in suitable places. This will remind the members of the family to switch off lights, fans, TV etc., when not in use**
- 9) **Educate your domestic help like, maid servant, watch man, etc., to save electricity & to use water wisely.**

## My Promise

***It is my responsibility to save electricity at home and school.  
I will follow the above tips to reduce my home electricity bill amount.***

**My home electricity bill amount generated for the month of October, 2019.**

⇒ Rs. \_\_\_\_\_ /-

**My home electricity bill amount generated for the month of November, 2019.**

⇒ Rs. \_\_\_\_\_ /-

While doing this project I learnt the following:

- 1.
- 2.

The above project is a continuation of our Life Skills – Module, As always, we need to work as a team to induce and develop collective responsibilities in the child.

**Note : The School Management has initiated the work for solar power which is in progress.**
